Extrusion Polishing

Programmable machine suitable for the polishing of aluminum extrusions, sheets, flat and shaped surfaces

Moving carriage with 2 independent polishing units with 3 CNC programmable axis each.

- Polishing rollers with 450 mm diameter and width ranging from 800 to 1300 mm.
- Automatic pressure control and mop wear compensation.
- Programmable set up of the mop cutting speed.
- Possibility to follow shaped products.
- Independent polishing rollers with the possibility to mount diversified mops and compound.
- Liquid compound spraying system with high pressure spray-guns and tanks.
- Dust collecting hoods.
- Electrical cabinet with CNC controls.
- Programming software "user-friendly"
